SOU125, SOU180 and SOU200 – Hydraulic Squeeze Off Tool

SOU125, SOU180 and SOU200 features...

The SOU180 and SOU200 versions have CNC machined stops and an integral hydraulic jack enabling a maximum squeeze force of 16 tonnes.

The SOU125 has a maximum squeeze force of 8 tonnes.

The units are fitted with safety check screws to prevent accidental release and also incorporate a jack spring return mechanism. 'Pipe stops' are used on the units for each diameter/SDR combination thus ensuring the optimum 'Squeeze gap'.

As standard our market leading SOU200 comes complete with stop sets to suit SDR11 and SDR17.6, in the pipe sizes denoted below. One set will be a fixed to the bottom beam ready for use and the other will be securely attached to the Squeeze Off frame crossbar.

Additional stop sets can be purchased for the unit, please contact our sales team to discuss your requirements further.
