

ASPHALT REPAIR

Potmix® Asphalt Repair is a cold mix asphalt product for quick and durable repairs of road surface damages. The asphalt compound hardens under intermittent compression - the more pressure, the harder the result. Traffic can be allowed onto the surface immediately after application in order to increase the pressure. Asphalt Repair works equally well in both summer and winter.

- FLEXIBLE PERMANENT COLD MIX ASPHALT
- HARDENS UNDER COMPRESSION
- CONTAINS NO SOLVENTS

Instructions of use: Prepare the surface by brushing off loose debris and dust. Fill any deeper recesses with compacted gravel/sand and leave a depth of 1-3 cm for the asphalt. Potmix® Asphalt Primer can be used to provide extra adhesion on very smooth surfaces and pothole edges. Apply the asphalt and compact with intermittent pressure. If no compacting tools are available, traffic can be let upon the area to act as the source of pressure.
